DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 13 recite the limitation "the component" in lines 4 and 6 respectively. There is insufficient antecedent basis for this limitation in the claims.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-10 and 12- 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Fimbel (DE 4016033).

With regards to claims 1, 13 and 29, Fimbel discloses a device for positioning components comprising a freely multiaxially movable central module (pedestal 16 can be freely moved, can rotate about the pedestal axis and translate about axis of member 110 as indicated in figure 3), and a plurality of multiaxially movable articulated arms (112, 114), the articulated arms being connected to the central module and having

Application/Control Number: 10/736,031

Art Unit: 3726

holding elements (146, 148), see figure 3 and abstract. Applicant should note that the articulated arms of the device of Fimbel extend from a folded position to an extended position and the device can be placed within an inner space of a component and the claimed method steps are carried out by the device of Fimbel.

For claims 2 and 25, Applicant should note that the articulated arms of the device of Fimbel. could be folded and unfolded as desired:

For claims 3-5, 17, 20, 22-24, 27 and 28, Applicant should note that such process steps and controls are old and well known in the art and the device of Fimbel could be programmed as claimed.

For claims 6 and 16, the device of Fimbel could be moved out of space as claimed.

For claims 7, 15, 18 and 19, the device of Fimbel could carry out a plurality of functions.

For claims 8 and 9, the arms of the device of Fimbel could be positioned synchronously or asynchronously in space.

For claims 10 and 14, the arms of the device of Fimbel are constructed for movement with in each case at least three degrees of freedom.

For claims 12 and 26, the device of Fimbel could be supported on a conveyor element carrying components.

For claim 21, Applicant should note that robot arms with such static holding forces are old and well known in the art.

Application/Control Number: 10/736,031

Art Unit: 3726

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fimbel.

Fimbel discloses a method for positioning components as shown above.

Although Fimbel does not disclose the clamping device directly supported on a base part of the component, however it would have been obvious to one of ordinary skill in the art at the time the invention was made that having the clamping device supported on the base part of the component is an obvious matter of design choice since the clamping device could be supported on any part of the component.

Response to Arguments

7. Applicant's arguments with respect to claims 1-28 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Essama Omgba whose telephone number is (571) 272-4532. The examiner can normally be reached on M-F 9-6:30, 1st Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
